

## Application of Hazard Analysis Critical Control Points (HACCP) System to Fish Salting

Filesize: 7.54 MB

### ***Reviews***

*A high quality pdf as well as the typeface applied was exciting to see. It really is written in simple words and phrases rather than difficult to understand. You will not really feel monotony at any time of your time (that's what catalogs are for relating to in the event you question me).*

GRIN Verlag Gmbh Okt 2014, 2014. Taschenbuch. Book Condition: Neu. 211x151x11 mm. Neuware - Thesis (M.A.) from the year 2013 in the subject Food Technology, grade: very good, , course: Food science, language: English, abstract: Although salting is considered the oldest method for fish preservation but it does not depend on good scientific principles. So, the current study was performed to apply the hazard analysis critical control points (HACCP) system to fish salting steps. Mullet fish (*Mugil cephalus*) samples were obtained from Qaroun Lake, El-Fayoum, Egypt. Whole and gutted fish samples were dry salted with different salt concentrations (15%, 20% and 25% salt concentration ww) and stored under ambient temperature for 90 days. Sensory tests, physical, chemical and microbial hazard analyses of raw and salted products were determined. Results showed that raw mullet samples were free from any foreign objectives and highly accepted. Fish flesh contained (on wet weight basis) 78.11% moisture, 17.99% crude protein, 2.46% lipid and 1.39% ash content. The values of quality criteria were 6.50 pH, 1.54 mg MA /kg sample thiobarbaturic acid (TBA) value, 25.24 mg/100g total volatile bases nitrogen (TVB-N) and 0.69 mg/100gm sample trimethylamine nitrogen (TMA-N). In addition, total plate count (TPC) and halophilic bacteria (HB) were  $25 \times 10^4$  and  $5.1 \times 10^4$  cell/g while yeasts and molds (YM) were not detected. After dry salting, previous values fluctuated according to salt level, whole and gutted form. Also, deterioration rate was accelerated in salted samples with low salt concentration and whole fish. So, salted whole and gutted fish trials with 15% salt were spoiled before other ones under the same conditions. 20% salted fish were preferred for appearance, texture and overall acceptability. In conclusion, dry salting and storage steps were CCP1 while, preliminary washing and preparation steps were CCP2. These steps must be monitored. Keywords: HACCPs; mullet fish; salting. 96...
